

Tripkicks Domains

During setup, Tripkicks will email each user a code word as part of their activation process. The user is required to enter this code word which will then complete their account activation by linking their account to their Tripkicks browser extension. This is done to ensure the security of the account and application.

If issues exist (e.g., significant delays) in receiving the email from Tripkicks, it is recommended that the company whitelist the various domains.

Please request that your IT group whitelist the following:

*.tripkicks.com
notify.tripkicks.com
support@notify.tripkicks.com
support@tripkicks.com

Additionally, if your company uses a third-party mail inspection service, like Proofpoint or Mimecast, please be sure to add the domains above to your safe recipients/senders list(s).

For questions, please contact launch@tripkicks.com
